## Aim:

Write a program to **sort** the given elements using (insertion sort technique).

Exp. Name: Write a C program to Sort the elements using Insertion Sort

At the time of execution, the program should print the message on the console as:

```
Enter value of n :
```

Technique

For example, if the user gives the input as:

```
Enter value of n : 3
```

Next, the program should print the messages one by one on the console as:

```
Enter element for a[0] :
Enter element for a[1] :
Enter element for a[2] :
```

if the user gives the **input** as:

```
Enter element for a[0] : 22
Enter element for a[1] : 33
Enter element for a[2] : 12
```

then the program should print the result as:

```
Before sorting the elements in the array are Value of a[0] = 22
Value of a[1] = 33
Value of a[2] = 12
After sorting the elements in the array are Value of a[0] = 12
Value of a[1] = 22
Value of a[2] = 33
```

Fill in the missing code so that it produces the desired result.

## **Source Code:**

## InsertionSortDemo3.c

```
#include<stdio.h>
void sort(int [],int);
void main()
{
    int a[20],i,n;
    printf("Enter value of n : ");
    scanf("%d",&n);
    for(i=0;i<n;i++)
    {
        printf("Enter element for a[%d] : ",i);
        scanf("%d",&a[i]);
    }
    printf("Before sorting the elements in the array are\n");
    for(i=0;i<n;i++)</pre>
```

```
{
       printf("Value of a[%d] = %d\n",i,a[i]);
   }
   sort(a,n);
   printf("After sorting the elements in the array are\n");
   for(i=0;i<n;i++)</pre>
       printf("Value of a[%d] = %d\n",i,a[i]);
   }
}
void sort(int a[],int n)
   int i,j,k;
   for(i=0;i<n;i++)</pre>
       k=a[i];
       j=i-1;
      \label{eq:while(j>=0&&a[j]>k)} while(j>=0&&a[j]>k)
          a[j+1]=a[j];
          j=j-1;
       a[j+1]=k;
   }
}
```

## Execution Results - All test cases have succeeded!
